1. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or fairly suggest a ceramic composition including .1-.4 moles of a filler of one of alumina and titania in combination with a glass composition having 1 mole of the claimed combination of a rare earth element (a) and boron oxide (b) and .01-.2 moles of an alkaline earth metal oxide. The claims are interpreted, as 1 mole of a+b must be present. Donohue (6,147,019 and 6,217,821; equivalent to Japanese document 11-335134) teaches a glass composition similar to applicants however the amount of refractory oxide filler is substantially greater, 50-75 wt%, than that claimed. Tick 6,281,151 is equivalent to JP 2001510771, cited on the supplied search report. An English abstract of JP 9-315855 cited in the disclosure and listed on the supplied PTO-1449 is supplied. Japanese document 2004-10437 is cited of interest for teaching a glass composition not unlike that claimed however the amount of oxide filler is outside that claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Information Disclosure Statement***

2. The information disclosure statement filed 11-23-05 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in
